COVID-19 Risk Mitigation, Quarantine and Return to Campus Protocols
For Summer Programs 2021

St. Albans School

*Participant refers to Student or Camper*

Daily completion of on-site or virtual screening (*method to be determined by June 1*):

- Upon arrival to campus, participants and employees will be expected to engage in a daily screening process that will likely include answering a set of questions to determine eligibility for on-site presence.

  **OR**

- Before heading to the STA each day, every participant and employee must engage in a daily health screening for symptoms potentially consistent with COVID-19 by using the Summer 2021 Daily Health form. To be allowed on campus, the participant or employee must (a) complete the form AND (b) not have answered YES to any question. *Failure to complete the form prior to arrival [even if you’d be cleared for participation/work] would result in immediate dismissal.*

Risk Mitigation Behaviors on Campus: Each employee and participant is expected to engage in the following practices to mitigate the risk of transmission of coronavirus during the day:

- Wearing a triple layer cloth face covering while on campus (exception allowed for eating and drinking or approved “mask breaks” should they be implemented at discretion of leader of activity with appropriate physical distancing);
- Maintaining physical distancing, defined as at least 6 feet of space in between individuals;
- Practicing frequent hand hygiene

A participant or employee who feels unwell and/or has symptoms potentially consistent with COVID-19: Any STA participant or employee who feels unwell (which could be feeling like one is coming down with a minor viral illness such as a cold, having allergy-like symptoms, or having a stomach/GI bug) or exhibits any of the following symptoms potentially consistent with COVID-19 (fever [defined as >100.3 F], chills, cough, shortness of breath or difficulty breathing, new onset of severe fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, feeling the onset of a cold, nausea or vomiting, diarrhea) **must stay home and consult their healthcare provider.** They may not return to campus unless either (a) it is 10 days after symptom onset, after which they may return to campus if any fever has been resolved for at least 24 hours without the aid of medication and their symptoms are improving; or (b) they are able to provide the Summer Programs office with

*Updated February 2021*
clearance from their health care provider that the symptom is related to a diagnosis other than COVID-19.

A participant or employee living in a household with an individual who has symptoms potentially consistent with COVID-19: Any participant or employee living in a household with an individual (for this purpose defined as sharing a kitchen, common areas, and/or bathrooms) who exhibits any of the following symptoms potentially consistent with COVID-19 (fever greater than 100.3 F, chills, cough, shortness of breath or difficulty breathing, severe fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, onset of a cold, nausea or vomiting, diarrhea) must stay home and may not return to campus until either (a) a healthcare provider has evaluated the household member and concluded that the symptom is related to a diagnosis other than COVID-19; or (b) the participant or employee has been symptom-free for 10 days following the last day on which the household member was symptomatic.

A participant or employee who has close contact with an individual with COVID-19: Any participant or employee who has come into close contact (as defined by the CDC as being within 6 feet of an infected individual for more than 15 minutes in a 24-hour period) with an individual who has COVID-19 must stay home and quarantine for 10 days following the last exposure to the COVID-19 positive individual, after which a return to campus may take place on day 11 so long as the participant/employee has been symptom-free and self-monitors for symptoms for the full 14-day period after exposure. If the participant or employee develops symptoms at any time during the 14 days after exposure, they should isolate immediately and contact their own healthcare provider.

A participant or employee with a diagnosis of COVID-19: Any participant or employee diagnosed with COVID-19 must isolate at home. If the participant or employee is symptomatic, they must remain home until at least 10 days after symptom onset, after which they may return to campus if any fever has been resolved for at least 24 hours without the aid of medication and their symptoms are improving. Asymptomatic individuals may return to campus no sooner than 10 days after the date of the positive COVID-19 test. Whether symptomatic or asymptomatic, anyone who has tested positive for COVID-19 must provide the Summer Programs office, or its specified health representative, with clearance from one’s healthcare provider before returning.

Travel from/to high-risk states or country: Any participant or employee who travels from/to a high-risk COVID-19 state (as identified by the District of Columbia) or country (CDC level 3 or 4) must quarantine before returning to campus as follows, by either

- obtaining a negative test result from a PCR COVID-19 test administered on or after day 7 post-travel before returning to campus; or
- waiting 14 days after travel before returning to campus.

Updated February 2021
**Household-member quarantining:** If a household member of a participant or employee is quarantining, either because of travel or COVID-19 exposure, and the household member remains asymptomatic, the participant or employee is permitted to be on campus. (Please inform the Summer Programs office if there is a household member quarantining due to COVID-19 exposure.)

**Quarantine (Travel and Close Contact) Policy for Fully Vaccinated Individuals**

Individuals who are fully vaccinated against SARS-CoV-2 do not need to quarantine after either exposure to an individual with COVID-19 OR after travel, provided that: (a) the vaccinated individual is asymptomatic; (b) at least two weeks has elapsed since the individual received the second dose of the vaccine; and (c) no more than 90 days has elapsed since the second dose was administered.

*Vaccinated individuals are required to adhere to all risk mitigation measures in place on the campus,* including wearing masks; maintaining physical distancing of at least six feet; frequent hand washing and other hand hygiene measures; opening windows in their work area or classroom when feasible; and engaging in the daily health screening method. (Vaccinated individuals who answer “yes” to any of the screening form questions should communicate with the Summer Programs office, or its specified health representative, to determine whether, if they are asymptomatic, they may come to campus. If they are symptomatic they must abide by regular quarantine/isolation procedures.)
